SOLUTION

MEĐIMURJE

**EUROPEAN SUPPLIER
OF QUALITY METAL PARTS
AND WELDED CONSTRUCTIONS**

ABOUT US

Excellence comes from experience.

Our development began as early as in 1906. Since 1990 we have been cooperating with world-renowned machine equipment manufacturers. Throughout this period we have proven our expertise and great capabilities in the production of metal structures, as well as a guaranteed fulfillment all our customers' specific requirements.

Metal processing experts.

Our main activities are:

- **Manufacturing machine parts for construction machinery**
/cabins, fuel and oil tanks, chassis, staircases.../
- **Manufacturing food industry machines**
/ baking ovens and other equipment for baking industry, meat industry, dairy industry etc./
- **Constructing boilers for heating**
- **Recycling plant parts**
- **Constructing other metal structures according to our customers' wishes**

HUMAN RESOURCES

EKO MEDIMURJE appreciates and rewards professionalism and because of that we continuously invest in education and specialization of our employees.

This powerful potential in human resources enables us to face future challenges and new projects with great enthusiasm and optimism.

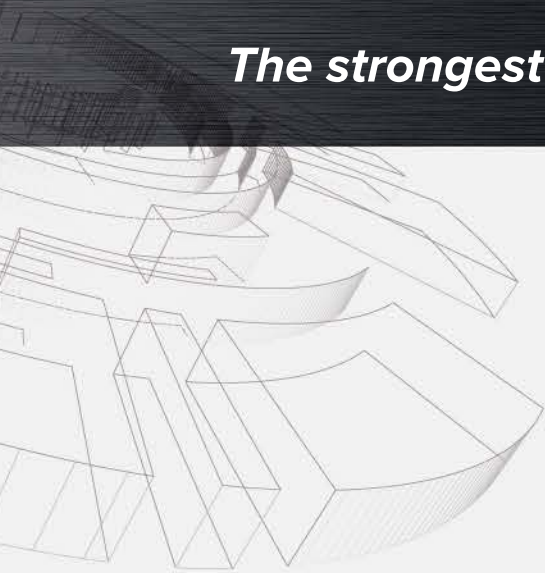

530 employees

- 51 highly educated
- 33 engineers
- 2 EWE engineers
- 86 certified welders

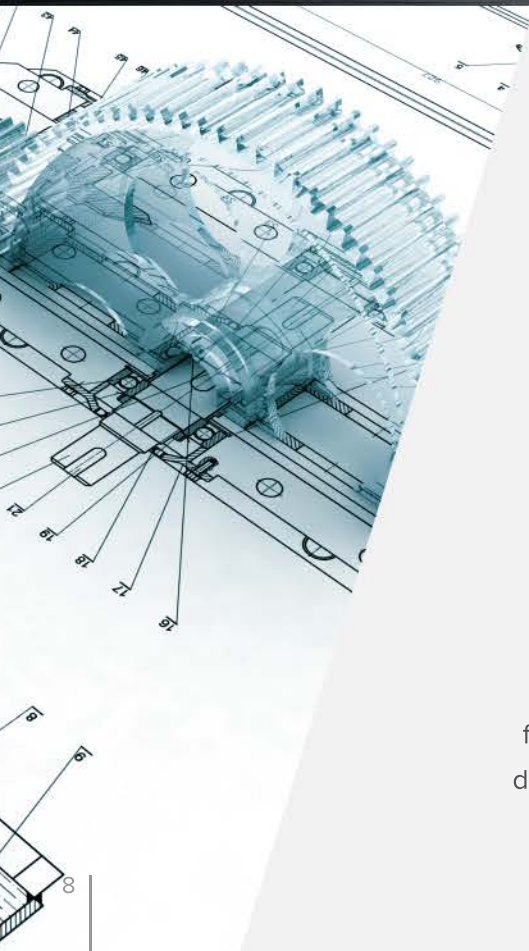

The strongest reason for our success are our people.

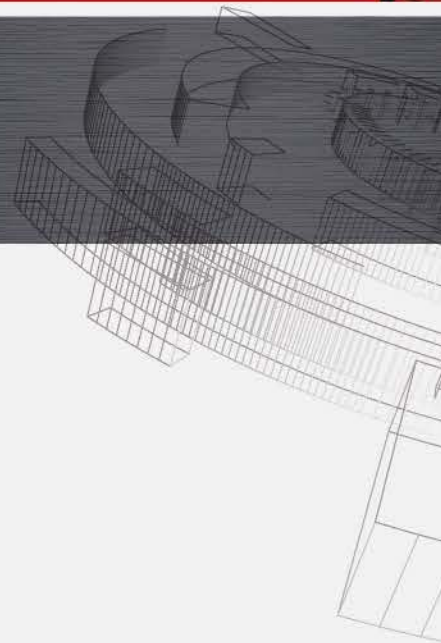

As part of this philosophy we promote creativity, continuous learning and free expression of new ideas. We accept each employee as an individual with his own views of life and work, culture and thinking.

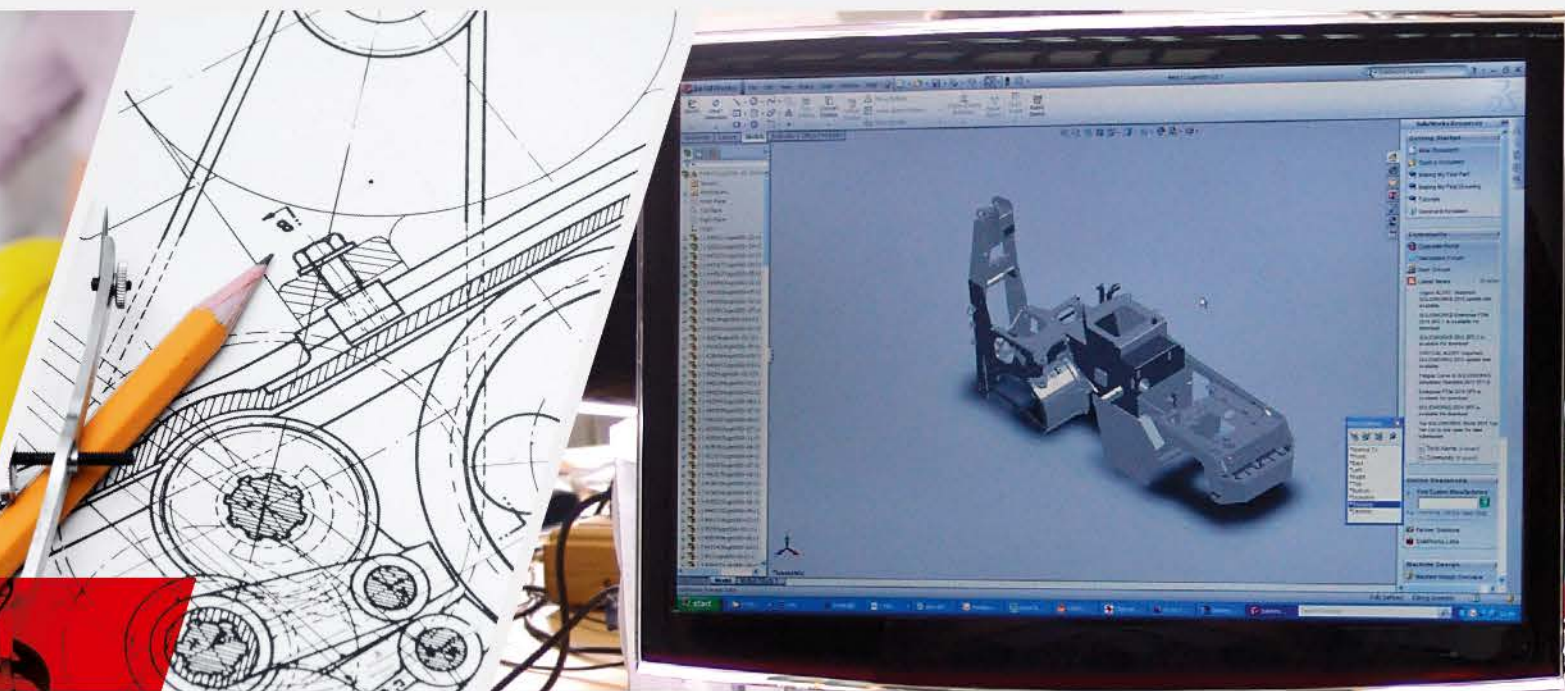

PROJECT APPROACH

Project approach enables us to participate in designing and engineering, and to take over the production of different equipment parts needed to put together a complete process plant. Customer and project oriented production is usually finalised with test assembling of all separate items, their disassembling and delivery directly to the site.

Knowledge is multiplied when divided.

We approach each project individually and we can put together a team of relevant experts in a very short period of time.

We have technical and human resources that allow us to perform the most complex projects on time and according to specific contractual terms.

The quality management system is an integral part of all our business processes. We invest our full knowledge and experience into highly organized and tightly controlled production.

Supreme quality without compromise.

The consistent implementation of our quality policy enables:

■ the fulfillment of our basic strategic aim of delivering a high-class product that will exceed our customers' expectations

■ providing our customers with products and services of the required quality with minimal costs: development, manufacture and marketing of process, energy and gas equipment, welded structures, plants and machinery, as well as spare parts for construction machinery and cabins

■ continuous monitoring and improvement of all processes, which contributes to a timely discovery of non-compliance and the adequate remedy thereof

■ an appropriate and effective organisation in which positive progress is followed, recognised and rewarded, to the satisfaction of all our employees

■ lifelong learning of our employees enabled and encouraged in all areas, and the possibilities provided for the realisation of their individual potentials (in order for them to be competent for performing the tasks entrusted to them, so that they are aware of the impact of their work on the quality of the production process, the product itself, as well as the impact on the environment)

■ a continuous investment in innovation, development and new technologies, environmental awareness and rational use of energy

■ planning, monitoring and rationalisation of our expenditures.

MACHINERY AND EQUIPMENT

EKO MEĐIMURJE is equipped with modern, versatile, technologically advanced equipment that enables successful production of complex parts. Big machining centers of up to 20 t weight and 12x1,6x4,1 m dimensions capacity, CNC turning and milling machines, welding robots (accompanied with certified WPQR procedures), bending machine with 1000 t of pressure and 8 m bending width, CNC pipe bending machine and other tools, devices and units give us vast possibilities to satisfy even the most demanding needs.

We generate changes and progress.

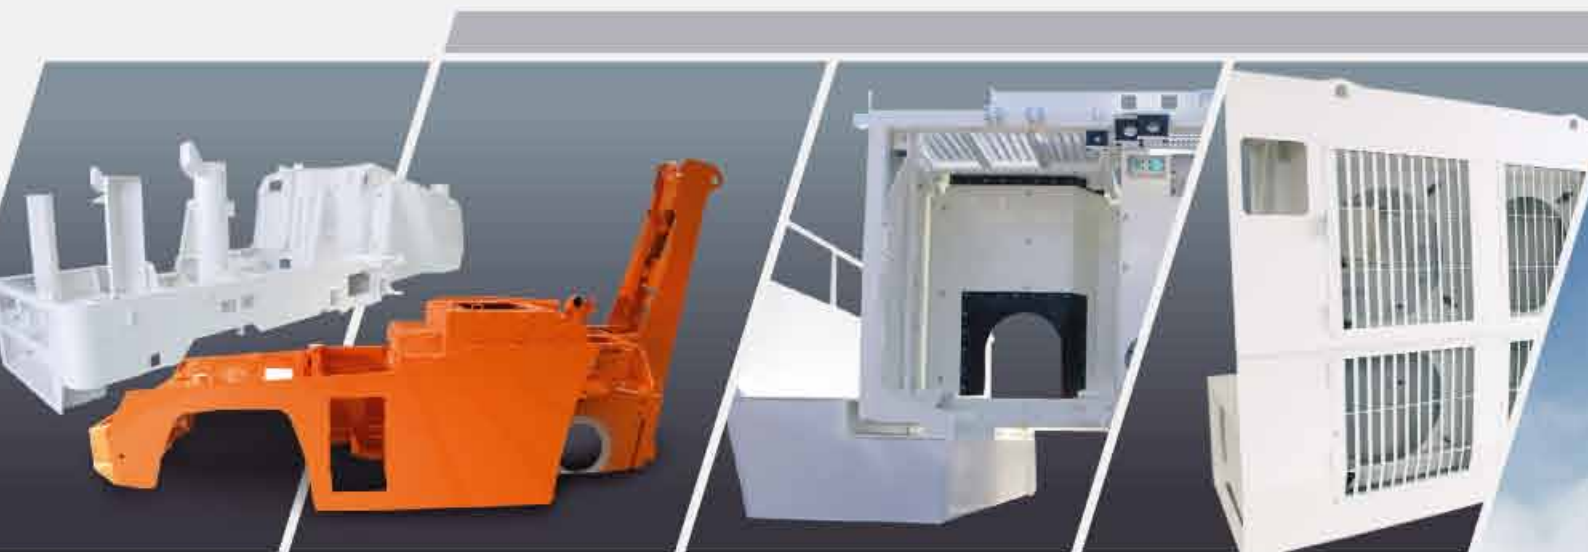

To assure the quality of production, we also have a portable 3D laser tracker and coordinate arm measurement devices, which is used to generate extensive measurement protocols for full customer satisfaction. Last but not least, we run the powerful ERP system that encircles all the resources in a fully traceable process easy to follow, control and report internally or to our esteemed customers.

We produce basic steel structures, as well as fully equipped driver cabins for all types of mobile machinery. Our cabins can be in “plug and play” level of assembly, fully tested and assured for quality by a report issued for each cabin separately. One-off or serial production, with the possibility of in-house design development, can be combined with FOPS or ROPS testing of cabin functionality. Our engineering department members work with CAD software paired with one of our customer, while our purchasing department acquires all commercial items necessary to deliver the complete product.

PRODUCTS: CABINS

PRODUCTS:

MACHINE PARTS

We produce machine parts up to 50 tons of weight. The machining of the parts can be done in the area of 12x1,6x4,1 m with 0,02 mm precision. Aside production, we can also assemble all the necessary commercial items that can be obtained through our purchasing department. Also, the frame surface can be protected by means of zinc coating or painting according to the customer's request.

The majority of stainless steel products which we deliver are made for the food industry, where this type of material is a must. Still, our possibilities cover a much wider field of application, which is why structural supports, covering elements, dairy industry parts and other types of elements are becoming standard in our production.

PRODUCTS:

STAINLESS STEEL

PRODUCTS: TANKS

Different types of tanks, for all kinds of gasses and liquids, for all types of machines - starting with wall thickness from 2,5 mm up - are regularly in our production. Aside building, testing and painting (in-and outside) of tanks, they are equipped with all the piping, instruments, wiring and other attachments to deliver a fully functional product. Leakage testing and other quality proofing techniques are deployed as a matter of course. Our design department can assist in the development of tanks, and all the needed commercial items can be acquired through our purchasing department.

Transport systems (belt and bucket conveyers) can be produced and delivered either as fully or partially assembled, or in a completely disassembled state. Aside conveyer parts, we can add all the necessary purchasing items to deliver a fully functional product ready to be installed on site. One-off or serial product can be surface-coated according to the request of our customer.

PRODUCTS:

TRANSPORT SYSTEMS

Recycling and energy is another market niche where EKO MEDIMURJE is strongly active. We produce incinerating grilles, incinerators, boilers and heat exchangers from any material defined by our customer. Our design and engineering department can also be involved in the initial stages of the product's life. As acquiring the commercial items is our standard procedure, we can offer a fully functional product to our customers.

Consoles and supports of all kinds are our standard products, as well as handrails and staircases. One-off or serial production, with or without precise machining, equipped with commercial items or not - are all within our area of expertise. They can be designed for all types of mobile and stationary machinery, different sizes or functions. Just like for all the other products, the surface can be protected by any needed type of coating.

RECYCLING AND ENERGY

CONSOLES AND SUPPORTS

HANDRAILS AND STAIRCASES

RELIABILITY.

You can always count on us.

We are completely dedicated to our customers' satisfaction by building long-term partnerships. We approach each project individually and take into account all your specific needs.

We promise you fair treatment, adherence to all contractual elements, and permanent expert support by our staff. Our employees are our greatest asset, and thus we continuously invest into their education, training and development. We are sufficiently staffed and trained for the most complex projects.

CORE VALUES

SPEED.

Always on time.

Meeting the agreed deadlines is one of the basic postulates of our business. Our business processes have been exquisitely optimised, which, apart from our excellent technological equipment, enables us to execute complex projects and large quantities in very limited time frames.

We have organised mechanical engineering, machining and assembling of our products on over 20000 m² of production floor, and a new 1700 m² paintshop containing two painting lines and a degreasing chamber.

MISSION.

We guarantee excellence of our products because...

- we invest our knowledge and experience in the creation of high quality product that will exceed our customers expectations.
- the focus of our considerations are satisfied customers with whom we wish to build a sincere partner relationship.
- we offer our employees safe and a stimulating working surroundings, where all individual requirements can be realized.
- we actively protect the environment and nature.
- we are continually investing in innovation and development.

VISION.

We will become one of the leading metal processing European companies whose top quality, reliability and professionalism have already been recognized by our customers, business partners, employees and shareholders.

ENVIRONMENTAL PROTECTION

We are aware that EKO MEĐIMURJE is a strong generator of development in our region and because of that we recognize our obligation to the local community - and encourage different cultural, social and sport programmes on the local and national level.

Through our policy of environmental protection, the management is obligated:

- to comply with the regulations
- to prevent all forms of pollution and negative impact on the environment
- to continuously improve the system.
